

# When Bad Implants Happen To Good People

In the real world, very few cases present themselves in textbook fashion. Trauma, lack of team communication and lack of education can result in less than ideal implant placement. The result is a need for creative implant restorative options. This program is a review of challenging cases and some tips for handling these difficult situations. In addition, unique solutions utilizing precision attachments and advanced technology will be discussed. This exciting material (some might say shocking) along with the presenters energetic style make this a fun and enjoyable learning experience.

## Learning Objectives:

- t Learn the importance of using implant placement stents.
- t Review of challenging cases and tips for handling difficult situations.
- t Discuss and understand the advantage of custom abutments

DENTAL LABORATORY

## Lary C. George, Jr., DDS, MS

Dr. Lary George received his DDS degree in 1988 from the University of Tennessee - College of Dentistry. He then entered private practice in general dentistry before enrolling in the Advanced

Prosthodontic/Masters Program at The Ohio State University. Upon completion of the program in 1995, he returned to private practice in Arkansas.

Today, Dr. George serves as a prosthodontics consultant for the largest network of dental laboratories in the United States and communicates directly with clinicians concerning fixed, removable and implant cases. His expertise is highly valued by both the laboratory and practicing clinicians. He has lectured extensively to regional and state dental associations and study clubs, including the Seattle Study Club.

## Sartell
